HALEEM BELLO

Product Engineer | AI Products, Full-Stack and Customer-Facing Systems
Atlanta, GA | thehaleembello@gmail.com | (470) 287-7285 | linkedin.com/in/haleembello | github.com/genialtechie

Customer-facing engineer with 4+ years delivering AI/LLM applications from requirements gathering through system integration, deployment, and performance optimization. Built voice agents and RAG systems and works across customers, product, and engineering to turn complex business problems into secure, reliable, scalable AI solutions.

CORE: TypeScript, JavaScript, Python, React, Next.js, Node.js, SQL, PostgreSQL, Supabase, Firebase, REST/GraphQL, LLM workflows, voice agents, RAG, structured outputs, evaluation, GitHub Actions, Docker, Vercel, AWS, Azure, CI/CD, PostHog, Postmark

EXPERIENCE

Founding Engineer | ReviewTailor (Career Companion) *Remote / Atlanta, GA*
Oct 2025 - Present

- Converted a pre-user prototype with no shared repository or delivery infrastructure into a production platform and an operable engineering function: established GitHub organization and access controls, isolated development/staging/production environments, CI/CD, Vercel deployments, Postmark email, PostHog analytics, and release and observability practices used today.
- Own technical and product direction across roadmap decisions, architecture, and release execution; translate priorities into scoped work, lead the weekly engineering cadence, unblock engineers and interns, interview and onboard contributors, and make product and delivery systems usable across the founder, partnerships, and marketing teams.
- Re-architected the core AI product around a normalized career-context model and production LLM pipelines for 9 artifact types; introduced schema validation, evidence traceability, review/recovery paths, and observability, reducing failed generation flows from about 20% to below 4% while closing 30+ reliability, security, and data-integrity issues.

Co-Founder and Full-Stack Engineer | Magpollo *Atlanta, GA*
Jan 2023 - Present

- Co-founded and lead technical and commercial delivery for a software studio with 34 production applications; originate and qualify opportunities, lead operator discovery, define solution architecture and scope, write proposals, close engagements, and remain accountable through implementation and production support.
- Led a nine-figure real-estate operator from an ambiguous operations problem to a signed AI systems engagement; mapped a five-person outreach workflow, separated deterministic contact controls from AI classification and drafting, preserved human approval, and designed integrations across the client's Google Sheets, Gmail, and Luma stack.
- Designed and shipped a production 3D custom-commerce system that has generated 5,000+ automated quotes, replacing DM- and screenshot-based intake with interactive product customization, real-time pricing, and structured order data for checkout and fulfillment.

IT and Automation Intern | iTech e-Services *Norcross, GA*
Jan 2022 - Aug 2022

- Built Python automation for 500+ inventory parts, low-stock alerts, and production spreadsheets while supporting firewalls, workstations, printers, and network operations for a PCB manufacturing environment.

SELECTED PROJECTS

Voice Agent | Independent Project - Built an end-to-end voice agent from scratch and deployed it on Azure for cloud-hosted, live voice interaction.

Qualifies.me | Independent Project - Built an AI resume-optimization workflow with Next.js, TypeScript, Supabase, and Node.js, including file upload, parsing, ATS-style scoring, evidence matching, and tailored outputs.

EDUCATION AND ADDITIONAL

Georgia Gwinnett College | Information Technology, Software Development | Jan 2021 - Dec 2024
World Robotics Olympiad | Team Nigeria builder; national qualifier and international competitor, Sochi, Russia
